## Report on Simulated Teaching organized for B.Ed students of session 2022- 24

### Introduction:

Students play the part of teachers in simulated teaching, which is designed to closely resemble real situations. Students respond to changes in the circumstance as the simulation progresses by considering the effects of their choices and subsequent actions. Learning opportunities provided by simulated instruction go much beyond those found in the typical lecture, classroom, tutorial, or laboratory situation. It may give the learner the chance to assume a new job, to practice their learning, and to make decisions in a setting that is safe and as close to the real workplace as possible. In simulated teaching, which takes place in a virtual setting, students are given the chance to present the material themselves rather than listening to lectures.

### Objectives:

- Simulated teaching (lessons) helps to develop the skill of using teaching method.
- Simulated teaching (lessons) provides an opportunity to teacher-trainees to play the role of teacher, student and supervisor.
- Simulated teaching (lessons) increases confidence among teacher-trainees.

### Organization:

In view of the above facts, Nikhil Banga Sikshan Mahavidyalaya organized simulated teaching programme for the B.Ed. students of academic session 2022-24 on and from 31.08.2023 to 12.09.2023 based on following schedule.

Each student has instructed to teach two lessons periodically for **20 minutes** including interaction and feedback from supervisors and fellow students. After each teaching session, supervisors highlighted the mistakes of the students and suggest how to overcome those mistakes. The students realized their drawbacks and try to include those mistakes in their next session.

## Conclusions:

Through the safe making of mistakes and experiencing the consequences of those mistakes, simulation-based learning supports experiential learning. The students may expand their abilities and knowledge with assurance, which will result in deeper comprehension and a greater sense of self-accomplishment. Simulations encourage the application of analytical and critical thinking. Students participate in the activity more eagerly and interactively as a result of the situation feeling genuine.
